

TZD Loading Dock Enclosure

- Keep wind and inclement weather outside, and a safe, comfortable environment inside
- Reduce facility heating and cooling costs around loading dock zones
- Protect product from weather-related damage
- Maintain consistent temperatures and humidity levels in your facility

TZD Loading Dock Enclosure

Improve employee comfort and safety, and reduce energy costs

Custom-designed Zoneworks® TZD Loading Dock Enclosure creates a durable, affordable and effective environmental solution at interior or exterior open loading docks.

Durable, custom construction

Zoneworks Loading Dock Enclosure consists of flexible, insulated wall panels constructed of layers of industrial vinyl fabric wrapped around antimicrobial polyester batting. Individual panels connect securely with Velcro® attachment. Custom engineering ensures proper fit around corners and obstructions. Wind retention and structural framing methods are included in project design. Heavy-duty fabric curtain doors close off openings for trailer access when trailers are not present or not in use. Galvanized vertical control staffs with drop pins and floor sockets add stability in windy conditions.

Vertical control staffs

Compatible with all doors

Any door type can be incorporated into the design of a Zoneworks Curtain Wall. If desired, door framing can also be included in most applications.

Available options

- Clear vision panels
- Overhead fill panels
- Stand alone mounting frames

Note: Retrofit installation of any full height wall or curtain to an existing building may necessitate re-configuration or expansion of building fire suppression sprinkler system to maintain code compliance. It is the responsibility of the end user to consult with their insurer and/or local fire officials prior to installation of any retrofit curtains or walls.
